

Commercial and Industrial Energy Audits

Through a partnership with Electricities, the city of Rocky Mount Energy Resources department provides a commercial and industrial energy audit program. This program identifies energy saving opportunities by analyzing existing facilities and making recommendations for energy efficient practices and technology.

Prior to the audit, the auditor reviews the customer's usage history. During the audit, the auditor will perform an in-depth assessment of the facilities, mechanical systems and equipment. The auditor will then identify energy saving opportunities and make recommendations, which will be documented in a report and mailed to the customer. The Energy Resources communications coordinator arranges the scheduling of the audit between the customer and the auditor. Energy audits are scheduled during operational hours to get accurate insight into the normal business activity and production.

Commercial and industrial customers interested in scheduling an energy audit should call (252) 972-1269 or e-mail energyspecialist@rockymountnc.gov.

For additional information regarding the Energy Audit Program, visit rockymountnc.gov/energy_resources.

To schedule a free residential energy audit, call Customer Service at (252) 972-1250.

Energy Audit Program

Residential Energy Audits

Reducing the amount of energy used in your home leads to lower energy costs and lower utility bills. City of Rocky Mount customers can learn ways to save energy in the home by signing up for a free energy audit.

What happens during an energy audit?

Before the auditors arrive at your home, they will review your 12-month billing history to compare your month-to-month energy usage. On the day of the audit, the auditors will perform a walk-through of your home to look for potential energy savings in electricity, natural gas, water and sewer usage. The walk-through will include looking in the attic, crawl space, and interior of the home. The auditors will also ask questions about how you use energy in your home.

After the walk-through is complete, the auditors will discuss their findings and recommendations with you. They will also give you a complimentary Energy Kit to help you get started with your energy savings. The entire audit takes approximately an hour and a half to complete.

What's included in the Energy Kit?

The Energy Kit includes:

- Three light-emitting diode (LED) bulbs
- An air filter whistle
- Two digital thermometers
- Self stick weather strip
- Leak detector dye tablets

What happens after the energy audit?

After the audit, the auditors will mail or email your Residential Energy Survey that shows the breakdown of energy usage in your home. The survey also includes suggestions for saving energy that are specific to your home and lifestyle. Typically, the suggestions require little to no cost. However, more costly improvements may be suggested depending on the condition of the home.

How do I sign up for a residential energy audit?

To schedule an energy audit, call Customer Service at (252) 972-1250 or sign up online at www.rockymountnc.gov/energy_resources.
